

Travel checklist

If traveling by car or RV

- Remind passengers not to smoke in the car
- Securely fasten the oxygen tanks
- Keep a window partially open
- Do not store oxygen in the trunk of the car
- Do not store oxygen in an area where the temperature will reach 120° Fahrenheit
- In a recreational vehicle, do not store oxygen near an open flame

If traveling by bus/train/ship

- Contact the reservation office for specific information about the use of oxygen and special accommodations
- Most companies require at least two weeks' notice if you are going to be using oxygen on your trip

If traveling by airplane

- Most companies require at least four weeks' notice if you are going to be using oxygen on your trip
- Ask your physician what flow rate to use during your flight
- Request or book a direct flight, if available
- Most airlines require you to use their oxygen supply on the plane
- If there are layovers, ask if the airline will supply oxygen during that time
- Ask what the airline will charge for oxygen during the flight
- Arrange for your oxygen supply at your final destination
